Another massive feature included in the updates is the new Content-Aware Scaling is a new feature that will automatically resize the images of your photographs to make them look realistic and more creative no matter the size you shoot it at. Sort of similar to the Magnification feature from Photoshop CS6 and other versions, it takes an original image and preserves as much of its contents as possible while scaling the background. To enable this functionality, you need to be in Content-Aware Scaling mode by rolling the “Show Content-Aware Scaling Options” in the Processing panel (Options bar, second row from the bottom).
